A New Look at the
Pearl of Great Price

By Dr. Hugh Nibley

Part I. Challenge and Response

Unsettled Business—The recent reissuing of Bishop Franklin S. Spalding’s little book, Joseph Smith, Jr., as a Translator, though not meant to revive an old discussion but rather to extinguish any lingering sparks of it, is nonetheless a welcome invitation, or rather challenge, to those who take the Pearl of Great Price seriously, for long experience has shown that the Latter-day Saints only become aware of the nature and genius of their modern scriptures when relentless and obstreperous criticism from the outside forces them to take a closer look at what they have, with the usual result of putting those scriptures in a much stronger position than they were before. We have all neglected the Pearl of Great Price for too long, and should be grateful to those who would now call us to account.

In this introductory study we make no excuse for poking around among old bones, since others have dug them up to daunt us; but we should warn them that if they insist on bringing up the ghosts of the dead, they may soon find themselves with more on their hands than they had bargained for. A lot of water has gone under the bridge since
Egyptologists, including his own revered instructors, in the rudiments of the mysteries of hieroglyphics, and promises to proceed with such caution and discretion that even they will approve of his methods, however much they may disagree with his conclusions.

Dr. Nibley, who is professor of history and religion at Brigham Young University and who has been a contributing editor of The Improvement Era for 22 years, is eminently qualified for the project he has undertaken. In addition to his familiarity with things Egyptian, he actively uses the Latin, Greek, Hebrew, Syriac, Babylonian, Russian, French, German, Arabic, and Coptic languages. He is at home with primary documents and original sources.

Dr. Nibley's writings include nine extended series of articles in The Improvement Era. His ability has also received continued recognition in a wide variety of scholarly journals, including the Classic Journal, Western Political Quarterly, the Jewish Quarterly Review, and the Jewish Encyclopedia.

Dr. Nibley received his B.A. in history and the classics in 1934 from the University of California at Los Angeles, where he was graduated with high honors. In 1938 he received his Ph.D. degree from the University of California at Berkeley, where he also has done post-doctoral work. He has been a university fellow in historical research at the University of California at Berkeley, lecturer in history and social philosophy at Claremont College, and visiting professor in classical rhetoric at the University of California.

"A New Look at the Pearl of Great Price" promises to be one of the most significant series of articles to appear in the pages of The Improvement Era in recent years.

D.L.G.

One of 11 fragments of papyrus presented to the Church by New York's Metropolitan Museum of Art. The papyri, once in Joseph Smith's possession, are being studied.

1912, and of course many things that were said and written then with great confidence and finality would have to be revised today.

On the other hand, a careful survey of the journals will, we believe, show that the year 1912 saw more significant studies published in the field than any other year before or since; Egyptology reached a peak in 1912—it was the age of the giants. So if it should now turn out that the giants were anything but infallible, that should teach us to be wary of the scholarly dogmatism of our own day.

Nothing could be more retrograde to our desire than to call up the bearded and frock-coated savants of 1912 to go through their pompous paces all over again. But it is others who have conjured up the ghostly jury to testify against the Prophet; and unless they are given satisfaction, their sponsors can spread abroad, as they did in Bishop Spalding's day, the false report that the Scholars have spoken the final word and "completely demolished" (that was their expression) for all time the Pearl of Great Price and its author's claim to revelation.
"Of all the attacks on Mormonism, the great campaign of 1912 ... was the one that should have suc

The silence of the Latter-day Saints in a matter that concerns them so vitally can only be interpreted as an abashed silence, leading many of the world and of the Saints to conclude that there is nothing to be said in Joseph Smith's behalf, than which nothing could be further from the truth. And so the sorry little saga of 1912 must needs be retold if only to forestall indefinite repetitions of what happened then as well as in 1845, 1865, and 1903.

The situation today is essentially the same as it was on all those occasions, with the Mormons, untrained in Egyptology, helpless to question on technical grounds the assertions of such experts as Deveria and E. A. W. Budge, who grandly waved their credentials for all to see, impatiently stated their opinions, and then gingerly decamped, refusing to be led into any discussion with the ignorant opposition.

And so the debate has never really come to the floor, the challengers being ever satisfied that the mere sight of their muscles should be sufficient to settle the issue without a contest. "These 'experts' have given us a lot of opinions," wrote the outsider, R. C. Webb, of the 1912 affair, "which they have not attempted to prove by authoritative demonstration. ... We are concerned wholly with opinion, pure and simple, and not with anything that may be proved conclusively.")

For the benefit of those readers who may have forgotten some of the details of 1912, it may be recalled that Bishop Spalding asked eight Egyptologists what they thought of Joseph Smith's interpretation of the Facsimiles in the Pearl of Great Price. You can imagine what their answers were. Now let us take it up from there.

The Appeal to Authority—Of all attacks on Mormonism undertaken beneath the banners of science and scholarship, the great campaign of 1912 conducted by the Right Reverend F. S. Spaulding, Episcopal bishop of Utah, was the one that should have succeeded most brilliantly. Carefully planned and shrewdly executed, it enlisted the services of the most formidable roster of scholars that have ever declared against Joseph Smith as a prophet, while at the same time loudly professing feelings of nothing but affection and esteem for the Saints and a real desire to help them find the light in a spirit of high-minded dedication to truth at all costs.

Bishop Spalding's grand design had all the ingredients of quick and sure success but one, and if in spite of it the Pearl of Great Price is still being read, it is because the bishop failed to include in his tremendous barrage a single shell containing an item of solid and relevant evidence. If he has any other ammunition than names and credentials, he never uses it—he hurls at the Mormons a cannonade of titles and opinions, and nothing more. "The authority of experts in any line of research is always to be accepted without question, unless there is grave reason to doubt their conclusion. There is no such reason here." And who is talking? Spalding's No. 1 expert, a young man who had just got his degree (not in Egyptology)—he tells us that we must accept his verdict "without question" because he is an expert and sees no reason to doubt his conclusions. This is what we mean by authoritarianism.

But then, who would ever have thought in 1912 that any other kind of ammunition would be necessary? What was there to say after the official voice of Scholarship had spoken? The Mormons did what they could. They pointed out that equally great authorities had been proven wrong about the Bible time and again. They called attention to the brevity and superficiality of the experts' comments: "This 'inquiry,'" wrote Webb, "has been no inquiry at all in any real sense. ... [It] presents merely a medley of opinions. ... It furnishes absolutely no assistance to [the] reader. ..." They noted that the judges approached their task in a thoroughly hostile state of mind. When an editorial in the Church newspaper pointed out in the most reserved and respectful language that there were indeed some rather obvious contradictions and discrepancies in the views of the experts, and that the Mormons might at least be permitted to ask for "a stay of final judgment," since (as B. H. Roberts expressed it) "these questions that depend on special scholarship are questions that require time and research ... and the conclusions of the learned in such matters are not as unchangeable as they seem," the New York Times exploded with indignation: "... the Deseret Evening News spent its entire editorial page reviling scholars and scholarship." One did not talk back to recognized scholars—it just wasn't done.

The Deseret News editorial in question pointed out that the Mormons had some years before already anticipated Bishop Spalding's investigations by making inquiries on their own among leading British Egyptologists, which "at least serves to show that we have not been lax, nor afraid to learn from whatever light the wisdom of the world might throw upon the illustrations of the Book of Abraham and their translation by the Prophet Joseph."
Two days earlier an editorial in the Deseret News made a clear statement of policy: "The Latter-day Saints court inquiry, such as this. They want to know the truth, and only the truth. There is no important issue that they are not glad to face, whether presented by friend or foe." And in the discussion that followed, the Mormons proved their good faith and sincerity by printing in the pages of The Improvement Era the letters of Bishop Spalding and his supporters, without deletion and without comment, along with those of the Latter-day Saints defending Joseph Smith.

There was no such dialogue in the non-Mormon periodicals in which Dr. Spalding published, including his own Utah newspaper, The Utah Survey; in spite of his constant protests of impartiality and intellectual integrity, only his own and like opinions ever appeared there.

The Mormon writers, moreover, never claimed any such religious immunity as might have been conceded to Joseph Smith as a spiritual leader, but always insisted on arguing the case on its merits: "I allow the bishop all his claims to the dire results to 'Mormonism'" wrote B. H. Roberts, "if he can, to the point of demonstration, make his case good against Joseph Smith as a translator." Bishop Spalding's scholarly band, on the other hand, most emphatically did claim immunity—to question them was to "revile" that noble thing called Scholarship, and that was the secret of their strength.

When Dr. S. A. B. Mercer, a hustling young clergyman who ran interference for the bishop throughout the game, summed up the case for the prosecution, his argument made a perfect circle: "The failure of the Mormon replies," he wrote, "is explained by the fact that the unanimous opinion of the scholars is unassailable. In the judgment of the scholarly world, therefore, Joseph Smith stands condemned of self-deception or imposition." Who said that the Mormon reply had "failed"? Mercer did, to be sure. Here we see the great convenience of permitting the attorney for the prosecution to act as judge. Dr. Mercer announces that the Mormon replies to him and his colleagues have failed—because he says so. And what he says must be so because his colleagues agree with him.

When the Mormons pointed out that there was anything but unanimous agreement among the colleagues, Mercer sternly overruled them, explaining that where any ordinary person might find the disagreements rather obvious, "to the expert there is here no discrepancy." Only one had to be an Egyptologist to see it that way. That is why when B. H. Roberts was pressing Dr. Mercer pretty hard, the latter overruled him too, with the observation that the source of the difficulties in the case of Mr. Roberts, "is to be found in the fact that the writer is a layman in things Egyptian." What Mercer's explanation amounts to, as R. C. Webb observes, is the argument "in effect, that scholars in his department can make no mistakes," or, in Mercer's own words, that their opinions are "unassailable." How can one discuss an "unassailable" opinion? One can't—that is just the point; the issue is closed; no debate is intended or possible.

In his final letter, Dr. Mercer divides the opposition into three classes: "First, intelligent and fair-minded Mormons," namely, those who do not challenge the scholars in any way; "secondly biased Mormons (perhaps unconsciously)," that is, Mormons guilty of pro-Mormon leanings, including B. H. Roberts, John A. Widtsoe, John Henry Evans, and J. M. Sjodahl—in fact, all who have presumed to question the verdict of the experts. Fortunately for Mercer, all their remarks can be summarily stricken from the record, since they are "very ignorant in respect to the subject they pretend to criticise"—it is not for them under any circumstances to talk back; they are all out of order. Dr. Mercer's third class is "biased and ignorant gentiles," being any such as may be inclined to give ear to the Mormon replies.

And so the doctors must be allowed to sit in judgment on their own case because no one else is qualified; and if they should happen to decide in favor of themselves, why, there is just nothing we can do about it, since their expertise is far beyond the reach of the layman, placing them in fact "at the intellectual summit of the universe" by the ancient professional mystery of "autodeification in the order of knowing."

This arrangement is basic to the prosperity of most of the learned professions. Long ago the Jesuits devised a special vocabulary and a special discipline of theology which, they announced, only one of their faith could really understand; for any outsider to risk criticism of anything they chose to propound in that recondite jargon could only be the sheerest folly, as Arnold Lunn reminded the great scientist J. B. S. Haldane when the latter ventured to point out certain weaknesses in his theology. But then the scientists have played the same game for all it is worth. Thus, when "the main objections [to the evolutionary hypothesis] were clearly stated in its very early days," they were quickly overruled because "most of them came from people who were not trained biologists. Their objections could be
"To this day no one has come to grips with the Pearl of Great Price"

countered summarily on the grounds of ignorance, despite the fact that Darwin’s hypothesis appealed so largely to the evidence of common observation and experience.220 Common observation and experience, no matter how clear and convincing, were no match for official credentials.

Even while Sir Gavin de Beer boasts that "the foundation principle of science is that it concerns itself exclusively with what can be demonstrated, and does not allow itself to be influenced by personal opinions or sayings of anybody. . . . The motto of the Royal Society of London is Nullus in verba: we take no man’s word for anything,"221 he is guilty of seeking to overawe or at least impress us with the authority of men of "science" in general and of the Royal Society of London (all stand, please) in particular.

Just so, in the Spalding discussion "the prosecution rests its case on the reputations and standing of its witnesses. . . ."222 "In compiling the pamphlet," wrote the bishop in his summing-up, "I made no claim to a knowledge of Egyptology. I merely wrote an introduction to the opinions of scholars. In a matter of this kind most of us must form our judgment from the opinion of competent experts."223 Thus he echoes the opinion of his No. 1 expert, cited above, who gracefully returns the compliment, noting that after all, it was the good bishop’s opinion that in the end would settle all disputes: "The advisers of the Bishop proved to his satisfaction" that glaring contradictions of the judges did not really exist, "that there were no such differences. The apparent discrepancies were proved not to be real." Thus Spalding’s chief adviser declares that his advisers, by satisfying the bishop that all was well, had brought the issue to its final and satisfactory conclusion, binding all thinking men to accept and share his opinion.224

Thus reassured, Bishop Spalding proceeded to demolish R. C. Webb: "We feel that we should be in a better position to judge the value of the opinions of Robert C. Webb, PhD . . . if we were told definitely who he is. . . . If Dr. Talmage . . . would inform us what the author’s real name is, where he received his degree, and what academic position he holds, we should be better able to estimate the value of his opinions."225 Here it is again: The bishop is not interested in Webb’s arguments and evidence, but in his status and rank—considerations that are supposed to bear no weight whatever with honest searchers after truth—Nullus in verba! What on earth have a man’s name, degree, academic position, and, of all things, opinions, to do with whether a thing is true or not?

In this case the answer is—everything. Dr. Mercer frankly admits that he and the other scholars “did not seem to take the matter very seriously,” and devoted very little time to it indeed: “. . . the haste was justified in the minds of the scholars by the simplicity of the task. Even less time could be expected.”226

Elsewhere he explains the perfunctory treatment of the whole thing: “They probably felt as I did, that their time was too valuable to spend on such scientific work as that of Joseph Smith’s guesses.”227 Whatever the reason, they never intended to do any real work, but depended entirely on their credentials to see the thing through.

A word from such great men should be enough to settle anything, but still we insist on appealing to the slogan of the Royal Society. Many eminent scientists, in fact, are today calling attention to the crippling effect of appeal to authority and position in science, a professional compliance that “may in fact be the closing of our eyes to as yet undiscovered factors which may remain undiscovered for many years if we believe that the answer has been already found.”228 Thus a great biologist reminds us that “it is important to combat the assumption” that we know what primitive conditions of life were like (every scientist knew that in 1912), since “as long as this is assumed, insufficient effort will be put into the attempt to find ways to obtain genuine evidence.”229

Now, part of the secret of the unusual productivity of the Egyptologists of 1912 was a buoyant adolescent confidence in their own newly found powers, which present-day scholars may envy, but which they can well do without—there is something decidedly sophomoronic in their lofty pretensions to have plumbed the depths of the human past after having taken a few courses, read a few texts (bristling with question marks), and broken bread with the learned at a dig or two. Their inexpressible contempt for Joseph Smith as an ignorant interloper is a measure of their pride in their own achievement.

In 1912 the Egyptologist T. E. Peet took to task all laymen who “mistrust a process in which they see a critic assign half a verse to Source E and the other half to Source J.” Time has more than vindicated the skeptical laymen, but in those days Dr. Peet laid it on the line: “Have these people followed the developments of modern philology and do they realize that the critics . . . are men whose whole lives are devoted to the study of such problems, and whose knowledge of Hebrew and of the Semitic languages in general is so great that the differences of style . . . are as patent
to them as they would be in English to a layman? Professor Peet would have done well to harken to what Bishop Spalding’s own star witness, Professor A. H. Sayce, had written some years before:

“How then is it possible for the European scholars of today to analyse an old Hebrew book into its component parts . . .? Hebrew is a language that is very imperfectly known; it has long ceased to be spoken; only a fragment of its literature has come down to us, and that often in a corrupt state; and the meaning of many of the words which have survived, and even of the grammatical forms, is uncertain and disputed. In fact, it is just this fragmentary and imperfect knowledge of the language which has made the work and results of the higher critics possible. The ‘critical’ analysis of the Pentateuch is but a measure of our ignorance and the limitations of our knowledge. . . . With a fuller knowledge we would come to a recognition of the futility of the task.”

Subsequent discoveries have proven him quite right, but Sayce’s early protest was a voice in the wilderness. Soon the higher critics were having it all their own way, and none ran more eagerly with them than Sayce himself. B. H. Roberts, a personal friend of Spalding’s, admitted that the bishop held the whip handle: “I think the bishop is entitled to have it known by those reading these ‘remarks’ how eminent is the jury pronouncing in the case against the ‘Mormon’ Prophet. . . . One who can lay no claim to the learning of Egypt at first hand, . . . may well pause before such an array of Egyptologists. . . . In their presence it is becoming in me, and all others unschooled in ancient Egyptian lore, to speak with modesty and behave with becoming deference.”

One may wonder how an admittedly unqualified party could pass on such recondite qualifications in others, but it is the credentials of the specialists that impress Brother Roberts, not their knowledge, which he is in no position to judge. Faced by a solid phalanx of PhD’s, the Mormons were properly overawed; they had no David to go against these Goliaths, and for that they had only themselves to blame.

The Mormons Default—From the first the Latter-day Saints had good reason to expect the Pearl of Great Price to come in for some rough treatment. “Here, then,” wrote Parley P. Pratt in 1842, “is another subject for the Gentile world to stumble at, and for which to persecute the Saints. . . .” Within three years of that remark the world was firing the same scholarly blasts against the Facsimiles and demolishing their claims with the same devastating finality as was to delight the intellectuals again in 1865, 1912, and today.

The figures in the Facsimiles, it was announced in 1845, were “familiar and now understood,” and it served Joseph Smith right for “confidently defying inevitable exposure,” now that “the Champollions of the Bibliothèque de Réi [sic] and the British Museum” had the subject well in hand. It was already apparent to the learned that “the whole thing is too gross to bear patiently, too painful to laugh at. . . .” That should have settled the matter, but the Mormons were not convinced and would have done well in undertaking some study of Egyptian on their own.

Again and again Joseph Smith and Brigham Young had pointed the way for the Latter-day Saints to prepare themselves for just such eventualities, pleading with them to take heed to themselves and use their brains. Even during the grim days of December 1844, the leaders of the Church “advise[d] the Elders to get up schools, that all . . . might be taught in the branches of education, and prepare themselves, that the least might be fully competent, to correspond with the wise men of the world.” They were to meet the scholars of the world on their own grounds; but instead of that, human nature saw fit to expend its energies elsewhere: “There are hundreds in this community,” said Brigham Young in 1860, “who are more eager to become rich in the perishable things of this world than to adorn their minds with the power of self-government, and with a knowledge of things as they were, as they are, and as they are to come,” and he rebukes the Saints for being satisfied “to remain fixed with a very limited amount of knowledge, and, like a door upon its hinges, move to and fro from one year to another without any visible advancement or im-

Coffins similar to these may have housed mummies bought by Joseph Smith.
Improvement, lasting after the growing things of this life which perish with the handling."

Those Latter-day Saints who have gone on to higher studies have either pursued the physical and biological sciences or coveted bread-and-butter certificates that have rendered them all the more subservient to mere office and authority. To this day no one has engaged in the type of study necessary to come to grips with the Pearl of Great Price, though that great book openly invites such study: "If the world can find out these numbers, so let it be. Amen."

Up to the present, all studies of the Pearl of Great Price without exception have been in the nature of auxiliary studies—compendiums, historical background, etc.—or preliminary surveys. In 1879 George Reynolds noted that in spite of all provocation, "very little has ever been said by the Elders of the Church in advocacy of its claims as an inspired record," and that while "outsiders have vigorously attacked it ... styled its language 'gibberish,' and classed it among the 'pious frauds' ... the people of God have said or written little in its defense...."

His own book furnishes a clear demonstration of just why the Saints had never been able to get off the ground—they just didn't have the knowledge.

The authors of a long procession of articles in the Era in 1912, 1913, 1914, and 1917 frankly admitted their ignorance, and pleaded that they had been caught by surprise. Their studies are nonetheless by far the best to appear to date; the books, articles, and master’s theses turned out since then have largely repeated what they had to say, with perhaps an item or two added to the bibliographies where it was felt necessary to justify a degree in the seven arts. Even the extensive labors of James R. Clark, valuable as they are, are all of an introductory nature, clearing the decks as it were for the real action to come.

Full-scale college and extension courses, graduate seminars, Churchwide lecture series, stately public symposiums, books, pamphlets, monographs, newsletters, and articles, all done up in fancy bindings usually adorned with reproductions of the Facsimiles from the Pearl of Great Price or with faked Egyptian symbols to intrigue and beguile the public, have all failed to get beyond the starting point of the race, which after all must be run on the long hard obstacle course of Egyptian grammar and epigraphy not on the lecture platform. The Mormons, it seems, have gone all out for the gimmicks and mechanics of education, but have never evinced any real inclination to tackle the tough, basic questions of evidence raised by the Pearl of Great Price.

A new school of interpretation some years ago attempted to meet the challenge to and of the Pearl of Great Price by the face-saving thesis that the Book of Abraham was not written in Egyptian after all, but in "some Semitic language," and hailed this shifting of the discussion to more familiar grounds as putting "Book of Abraham investigation on a more sound and scholarly basis." But no studies were forthcoming on the new foundation save a few "primarily for the laymen... making no claim of being... learned or scientific." How, the ingenious student may ask, can any study hope to be "sound and scholarly" without being at least a little learned and scientific? One should not enter the arena unless one is willing to meet more formidable opposition than the gullible student and tractable layman.

(To be continued)

Eternal Gifts
By Susan Broschinsky
Age 19

If I were an inventor
And I could invent,
The thing I'd invent would be
Something as deep and as strong and as pure as the tide coming in from the sea.

If I were a painter
And I could paint,
The painting that I would do
Is to blend all the beauty of God's lovely Earth with the radiant freshness of dew.

If I were a musician
And I could compose,
The music I would bring
Is the joy from the birds and the babbling brook and the chapel bells when they ring.

If I were a speaker
And I could speak,
The words that I would say
Would come from the soft whispering breezes at the tender waking of day.

And all of these things that I would have, even though they be so few, I'd carefully wrap in eternal truth, and then I would give them to you.

January 1968
