**Abstract:** This article argues that the existence of Indian artifacts help to form the conclusion that two separate cultures existed in ancient Northwestern America.
INDIAN ARTIFACTS

from Klamath Falls

By W. RUDGER THORNOCK

Northwestern States Mission

Concerning the coming to light of the evidences of an ancient North American people

Our interest in any evidence bearing upon the record of Ancient America led my missionary companion, Elder Donald D. Noel, and me to meet a man living in Klamath Falls, Oregon, who has made a lifetime hobby of collecting and studying Indian artifacts. The man, Mr. Frank A. Payne, has a very interesting collection numbering over 14,000 pieces. A great number of these he has catalogued and he has kept a record of where and how each was discovered, giving conditions surrounding the place of discovery. Mr. Payne very kindly and generously gave us of his time and the information which he has. We spent a number of interesting hours with him and learned much concerning his work.

Most of the relics were gathered from what was once an old lake, known as lower Klamath Lake, which has been drained and has since become a fertile field for Mr. Payne’s work. Little digging has been done in this study of many years, but as the wind moved the powdery earth from the lake floor the relics were uncovered and a consistent record concerning these artifacts has been made available. At times a great number of relics were located in one small area and when such was the case Mr. Payne would use his shovel. He found one “Kitchen Midden” in which were the cremated remains of many people. Some were entirely cremated, others just partly so, and still others not touched by fire. This brought a question to the mind of our inquisitive friend and by study and from the old Indians here, he found that the extent of the cremation depended upon the station in life held by the deceased. If they were wealthy and

had means to pay to have wood hauled for burning the body, they were entirely cremated; if middle class, they were partly so honored, and if poverty-stricken, they were not touched by fire.

Mr. Payne’s work has caused interest among men who are eminent in the field of anthropology. Many tools and weapons, together with human and animal artifacts, some of which have become petrified, have been gathered for study in laboratories and work rooms. All evidence points to the fact that the Indians of the eastern Oregon country were witnesses to the destruction of Mt. Mazama, in place of which now is found Crater Lake.

A word concerning this great wonder, Crater Lake, which Dr. Cressman, head of the Anthropology Department, University of Oregon, estimates was formed between four thousand and ten thousand years ago and presumably at a time nearly four thousand. Where Crater Lake now is, once stood a great mountain peak which was built up by volcanic eruptions from time to time, until the mountain had reached a height of between twelve thousand and fourteen thousand feet. Then came the greatest movement of this huge volcano, at which time liquid stone was thrown over miles of the surrounding country and covered everything in its path. The shell of the mountain collapsed and partly filled in the great hollow left when the lava belched forth, forming the basin for what is today one of the most beautiful and purest bodies of water in the world.

Orrin Porter Rockwell

companyed us happy and content, without the remotest thought of any advantage to himself, proud of being able to give us this proof of his sincere regards."19

Whatever extremes Porter's weaknesses may have reached for Valley Tan [whiskey], he maintained respect and consideration for his Church and its leaders. In their presence Porter was ever at his best, both in appearance and manners. Gottfredson relates such an experience in the following account:

"...While I was conversing with the President, Orrin Porter Rockwell called and gave President Young an account of the affair with the Indians at Pleasant Grove. I listened very attentively to his recital of the matter...

O. Porter Rockwell while at Pleasant Grove was taken to be slightly intoxicated. He was active in moving among the crowd at the soldiers' camp; this all seems very distinct even now; I thought him almost silly with drink and had little respect for him until this interview with President Young. On that occasion he was well dressed in a black broadcloth suit, wore neatly polished shoes and a black silk hat; his language was free and grammatical. I concluded that Rockwell lived a double life in the interest of his friends and God's cause on earth. I will ever remember him with esteem."20

(To be Concluded)

"M-M-MM—
CLAM SOUP!"

"M-m-mm's the word" for piping hot soup—or chowder—when it's made of Pioneer Minced Razor Clams! These rare razor clams come from a few cold, spray-drenched beaches on North Pacific ocean. The catch is limited... yet, even so, only the pure, clean white meats go into each can of Pioneer Clams—flavor-sealed by an exclusive process in their own natural nectar.

You'll find many ways to serve Pioneer Clams—from nectar cocktails and soup courses to one-dish casseroles. So buy the pantry-handy package of three cans... one for now, one for company and one for emergencies.
